Product Manual

OxiSelect™ Nitrotyrosine ELISA Kit, Trial Size

Catalog Number

STA-305-T  32 assays

FOR RESEARCH USE ONLY
Not for use in diagnostic procedures
**Introduction**

The modification of tyrosine residues in proteins to 3-nitrotyrosine by peroxynitrite (Figure 1) or other potential nitrating agents has been detected in biological systems that are subject to oxidative stress. Detection of nitrotyrosine-containing proteins has been reported in many human and animal diseases or cellular models of disease. While all tyrosine residues in proteins may theoretically be targets for nitration, presumably the efficiency of tyrosine nitration is dependent on various biological conditions such as the local production and concentration of the reactive species, the existence and availability of antioxidants and scavengers, the accumulation of inflammatory cell and the presence of pro-inflammatory cytokines, as well as the proximity and compartmentation of these components.

![Diagram of 3-Nitrotyrosine Formation](image)

**Figure 1. 3-Nitrotyrosine Formation**

The OxiSelect™ Nitrotyrosine ELISA Kit is a competitive enzyme immunoassay developed for rapid detection and quantitation of 3-nitrotyrosine in protein sample. The quantity of 3-nitrotyrosine in protein sample is determined by comparing its absorbance with that of a known nitrated BSA standard curve. The kit has a nitrotyrosine detection sensitivity range of 20 nM to 8.0 μM. Each Trial Size Nitrotyrosine ELISA Kit provides sufficient reagents to perform up to 32 assays, including standard curve and unknown protein samples.

**Assay Principle**

The nitrotyrosine quantitation kit is a competitive ELISA. The unknown protein nitrotyrosine sample or nitrated BSA standards are first added to a nitrated BSA preabsorbed EIA plate. After a brief incubation, an anti-nitrotyrosine antibody is added, followed by an HRP conjugated secondary antibody. The protein nitrotyrosine content in unknown sample is determined by comparing with a standard curve that is prepared from predetermined nitrated BSA standards.

Kit Components
1. Nitrotyrosine Coated EIA Plate (Part No. 230501-T): One strip-well microplate containing 32 wells (8 x 4).
2. Anti-Nitrotyrosine Antibody (Part No. 230502-T): One 5 µL vial of anti-nitrotyrosine Rabbit IgG.
5. 10X Wash Buffer (Part No. 310806-T): One 30 mL bottle.
6. Substrate Solution (Part No. 310807-T): One 4 mL amber bottle.
7. Stop Solution (Part. No. 310808-T): One 4 mL bottle.
8. Nitrated BSA Standard (Part No. 230503-T): One 200 µL vial of 1 mg/mL Nitrated BSA in PBS with a nitrotyrosine content of 40 μM (2.7 mole of nitrotyrosine per mole of BSA). The protein nitrotyrosine level is predetermined by a spectrophotometric method as described by Ischiropoulos et al (See Ref. 3).

Materials Not Supplied
1. Protein samples such as purified protein, plasma, serum, cell lysate
2. 10 µL to 1000 µL adjustable single channel micropipettes with disposable tips
3. 50 µL to 300 µL adjustable multichannel micropipette with disposable tips
4. Multichannel micropipette reservoir
5. Microplate reader capable of reading at 450 nm (620 nm as optional reference wave length)

Storage
Upon receipt, aliquot and store the Nitrated BSA Standard at -20°C to avoid multiple freeze/thaw cycles. Store all other kit components at 4°C.

Preparation of Reagents
- 1X Wash Buffer: Dilute the 10X Wash Buffer Concentrate to 1X with deionized water. Stir to homogeneity.
• Anti-Nitrotyrosine Antibody and Secondary Antibody: Immediately before use dilute the Anti-
Nitrotyrosine Antibody 1:1000 and Secondary Antibody 1:1000 with Assay Diluent. Do not store
diluted solutions.

**Preparation of Standard Curve**

Prepare a dilution series of Nitrated BSA Standards in the nitrotyrosine concentration range of 0 nM –
8000 nM by diluting the Nitrated BSA stock solution in Assay Diluent (Table 1).

Table 1. Preparation of Nitrated BSA Standards

**Assay Protocol**

1. Prepare and mix all reagents thoroughly before use. Each protein sample including nitrated BSA
and blank should be assayed in duplicate.

2. Add 50 µL of unknown protein sample or nitrated BSA standard to the wells of the microplate.
Incubate at room temperature for 10 minutes on an orbital shaker.

3. Add 50 µL of the diluted anti-nitrotyrosine antibody to each well, incubate at room temperature for
1 hour on an orbital shaker.

4. Wash microwell strips 3 times with 250 µL 1X Wash Buffer per well with thorough aspiration
between each wash. After the last wash, empty wells and tap microwell strips on absorbent pad or
paper towel to remove excess 1X Wash Buffer.

5. Add 100 µL of the diluted Secondary Antibody-Enzyme Conjugate to all wells.

6. Incubate at room temperature for 1 hour on an orbital shaker.

7. Wash microwell strips 3 times according to step 4 above. Proceed immediately to the next step.

8. Warm Substrate Solution to room temperature. Add 100 µL of Substrate Solution to each well,
including the blank wells. Incubate at room temperature on an orbital shaker. Actual incubation
time may vary from 2-30 minutes.

   Note: Watch plate carefully; if color changes rapidly, the reaction may need to be stopped sooner
to prevent saturation.

9. Stop the enzyme reaction by adding 100 µL of Stop Solution into each well, including the blank
wells. Results should be read immediately (color will fade over time).
10. Read absorbance of each microwell on a spectrophotometer using 450 nm as the primary wavelength.

**Example of Results**
The following figures demonstrate typical Nitrotyrosine ELISA results. One should use the data below for reference only. This data should not be used to interpret actual results.
